

Servers & Ports

Recommended setup for SSL connection:

Configuring [Autodiscover](#) & [Autoconfig](#) DNS records for your domain can simplify the configuration of your desktop clients, such as Outlook and Thunderbird.

Protocol	Server Address	Ports
IMAP (Incoming)	imap.emailarray.com	993
SMTP (Outgoing)	smtp.emailarray.com	465
POP3 (Incoming)	pop.emailarray.com	995

You must enable SMTP Authentication in your e-mail client in order to send e-mails out.

Also note that **IMAP is recommended rather than POP**, as it's a protocol made to support several devices accessing one same account, with all folders synced at our server, which also guarantees that our backups will be executed.

Other ports are available, for SSL, TLS or non-SSL setup:

IMAP Service

Encryption	Server Address	Ports
SSL	imap.emailarray.com	993

Encryption	Server Address	Ports
TLS	imap.emailarray.com	143
NONE	imap.emailarray.com	143

SMTP Service

Encryption	Server Address	Ports
SSL	smtp.emailarray.com	465
TLS	smtp.emailarray.com	25,26,587
NONE	smtp.emailarray.com	25,26,587

Important

You must enable SMTP Authentication in your e-mail client in order to send e-mails out.

POP3 Service

Also note that **IMAP is recommended rather than POP**, as it's a protocol made to support several devices accessing one same account, with all folders synced at our server, which also guarantees that our backups will be executed.

Encryption	Server Address	Ports
SSL	pop.emailarray.com	995
TLS	pop.emailarray.com	110
NONE	pop.emailarray.com	110
