

Webmail - How To

Features available in our Webmail GroupOffice - available for **Basic** and **Enhanced** mailboxes.

To access your webmail you have a few options:

- Automatically, by adding a CNAME in your DNS: webmail.mydomain.com -> webredirect.emailarray.com.
- Directly, by going to login.emailarray.com.
- From the **Admin Panel, Users** page, click on the little envelope and you'll be redirected to your webmail. You can save the link for future reference.
- Manually: if your domain is **mydomain.com**, in your browser you can go to **mydomain--com.w.emailarray.com**. Make sure you replace mydomain--com with your own domain name.
